Project Description

This project required the provision of all labor, materials and equipment to repair several asphalt roads and parking lots at USCG Base Los Angeles/Long Beach. All overlay work included correcting the contour of the old pavement to allow the best possible grading for drainage into the existing storm drain system. In addition, a pavement study conducted in 2004 served as the basis for this project and split the project into distinct sections. Specific elements of work included the removal of all concrete, asphalt, trees, prison fencing and fill along a 30-foot curb section dividing the former Immigration/Customs parking lot from the Coast Guard parking lot. A new roadway with concrete curbing was then constructed between the two areas to significantly improve the efficiency of base operations. Other elements of work included the slurry seal of 4,400 square yards of three parking lot sections. Lastly, several optional bid items were exercised to repave an additional 3 sections totaling 5,100 yards of pavement and to construct code compliant ADA parking areas. Restriping to original striping patterns to include 50 parking stalls was also completed. Sustainable Group key personnel performed on-site construction management, field superintendence, safety oversight, and Quality Control/Quality Assurance (QA/QC) services throughout the duration of this project that was completed without any safety or quality control incidents of any kind.

Prison fence removal
